

IN THE SPECIFICATION

Please replace the Abstract at page 183, line 1-22, with the following rewritten paragraph:

ABSTRACT

An excellent composition for a charge-transport film, which can be used to produce an organic electroluminescence device having excellent heat-resistant property, high hole injection/transport capacity and capable of functioning at a low voltage, is proposed.

~~It comprises at least an ionic compound expressed by the following general formula (1) or the like and a charge-transporting compound,~~

~~wherein in general formula (1):~~

~~R¹¹ represents an organic group bound to A⁺ via a carbon atom; R¹² represents an arbitrary group; R¹¹ and R¹² may combine together to form a ring;~~

~~A⁺ represents an element belonging to the third and subsequent periods and group 17 of the long form periodic table;~~

~~Z₁ⁿ¹⁻ represents a counter anion; and~~

~~n₁ represents an ionic valency of the counter anion.~~
